Web Scraping

How Web Scraping is done?

- Sending an HTTP request : sent to the target web server to retrieve the desired web page.
- Retrieving the Web Page Content: Server responds with the web page content, usually HTML format.
- Parsing the HTML: HTML content is parsed to locate the specific data elements using libraries or tools designed for this purpose.
[Beautifulsoup, Scrapy]
- Extracting Data: Relevant data is extracted from the parsed HTML structure based on the predefined rules or criteria.
- Storing Data: The extracted data can be stored in various format such as csv, json or database, for further analysis.
- Handling Challenges: Web Scrapers may need to address challenges like

- Anti-scraping measures
- Dynamic content loading (JavaScript)
- Legal considerations
